

HEPA FILTER

REPLACEMENT AND TESTING

FILTREX OFFER A COMPLETE HEPA FILTER SERVICE.

We supply, install and integrity test HEPA Filters in Air Handling Units, UCVs and Cleanrooms.

HEPA filters can become blinded with particulate over time, increasing the differential pressure across the filter. As this happens, the airflow through the filter will reduce, usually resulting in a reduction in air quality.

Routine verification and performance testing helps to identify any issues and the best time to replace HEPA filters. Ensure compliance by maintaining appropriate levels of cleanliness and air quality through replacing and testing HEPA filters when required.
